

HDS APCUG DISCOUNT. As Gabe Goldberg announced during his *Hard Disk Sentinel* Wednesday Workshop presentation, HD Sentinel's János Máthé, Developer and CEO, has given APCUG a 40% discount on both a single and 5-family license.

Hard Disk Sentinel (HDS) is a multi-OS SSD and HDD monitoring and analysis software. Its goal is to find, test, diagnose, and repair hard disk drive problems and report and display SSD and HDD health, performance degradations, and failures. Hard Disk Sentinel gives complete textual descriptions and tips and displays/reports the most comprehensive information about the hard disks and solid state disks inside the computer and in external enclosures (USB hard disks / e-SATA hard disks). Many different alerts and report options are available to ensure the maximum safety of your valuable data.

There is no need to use separate tools to verify internal hard disks, external hard disks, SSDs, hybrid disk drives (SSHD), disks in RAID arrays, and Network Attached Storage (NAS) drives as these are all included in a single software. In addition, Hard Disk Sentinel Pro detects and displays status and S.M.A.R.T. information about LTO tape drives and appropriate industrial (micro) SD cards and eMMC devices, too. See the How to: monitor Network Attached Storage (NAS) status for information about hard disk monitoring in Network Attached Storage (NAS) devices.

Hard Disk Sentinel monitors hard disk drive / HDD status, including health, temperature, and all S.M.A.R.T. (Self-Monitoring, Analysis, and Reporting Technology) values for all hard disks. It also measures the disk transfer speed in real time, which can be used as a benchmark or to detect possible hard disk failures and performance degradations.

*****APCUG DISCOUNT*****

40% discount valid until September 10, 2024

USD \$33 [\$19.80] for the single PC license
